Project title - Devconnector

Devconnector is a social media web application for developers. Developers will be able to showcase their programming skills, education and work experience.Each user will have a profile under which the above mentioned information will be shown. One of the main features since its developer related is that it shows the latest five github repositories given the users github username using the github api. Then there is a functionality of simple posts with likes and comments. There are a number of functions needed for registration and authentication. We are implementing additional functions for adding a post, adding a like, removing a like if u have liked it, and adding a comment. The important models created will be Profile, Post and User. There are a few protected routes and a few that are accessible to everyone.
